

Pondless Water Features & Fountainscapes Benefits

Safety

Because there is no pool of water, a Pondless Waterfall is a great option if you are concerned about safety issues associated with a traditional pond.

Cost

Cost can be a big factor when considering the type of water garden you want built. In most cases, the price of Pondless Waterfall will be less than a pond, because there is less labor involved, as well as fewer rocks and materials. Operating costs are also less. Because you are not dealing with an established ecosystem, it is not necessary to run the pump 24/7.

Space

The small size of the Pondless Waterfall means you can build and enjoy a beautiful waterfall anywhere in your yard.

Maintenance

Taking care of your Pondless Waterfall is easy. Filling the reservoir every few weeks to compensate for water loss due to evaporation is all that's required.

Flexibility

Perhaps the best part of the Pondless Waterfall is the possibility for the future. If you change your mind later, wishing you had built a pond, that is ok! If you leave enough room around the base of the waterfall, it is easy to add a pond.
